

Amaru – Events timeline

25th August 2026

Relay node available: Have a “sane” release of a relay node you can use on mainnet ✓

- ▶ Showcasing the setting up of an Amaru relay (from scratch)
- ▶ Using the basic functions of the relay
- ▶ Observability and traces available

Block production node release (Target): September 29th start with a pre-release, have a beta ~4weeks after

Diversity “celebration day” in Singapore: 6th October

- ▶ **Attendees:** Every node implementation leader
- ▶ **Purpose:** Get a look at all the implementation timelines

Node diversity workshop in London: 12th & 13th November

- ▶ **Attendees:** Node implementation teams; SPOs; Hard fork decision makers
- ▶ **Purpose:** Decide on the cost-efficient approach for Cardano network upgrades

Amaru – Diversity “celebration day”

3

Hosted in Singapore: 6th October (public open call)

Key message: Diversity in Cardano is here, let's see why it's useful and where it's going

Content: Why diversity matters, what does it look like, what's the current plan

- ❑ Diversity, decentralization, security and resilience introduction (*General introduction*)
- ❑ Node implementers progress update and timelines (*1 node implementer representative gives a quick “this is what we do” “this is when we’ll produce a block”*)
- ❑ Cardano diversity ambassador program, draft of the 2027 Amaru proposal (*Damien*)

People invited:

- ▶ At least one representative of each node implementation:
 - ▶ Haskell node, Turbocardano (C++), Dingo (Go), Yano (Java), Dugite (Rust), TSUNAGI (Zig), Gerolamo (TypeScript), Dolos (Rust), Razor (.NET), Scala node
- ▶ Special guests: Leios R&D team, Cardano Blueprint

Introducing the node implementations – Amaru

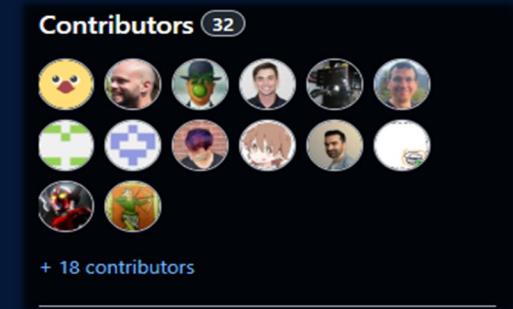

4

What is Amaru : A new fully interoperable block-producing Cardano node developed in Rust.

Who is building Amaru : Open source with dedicated contributors

Where we are going : Achieve block production in 2026

- ▶ Q3 2026: Release a robust relay node binary ✓
- ▶ Q4 2026: Be able to produce a first block on mainnet, work on conformance, performances and robustness
- ▶ 2027: Evolve Amaru to handle new use cases, improve efficiency for RAM & CPU usage
